

B. AMENDMENTS TO THE SPECIFICATION

Item 2: The Examiner states that the substitute specification and amendments to the specification filed March 28, 2007 have not been entered because it is not clear if the amendments to the specification are to be entered before the substitute specification is entered, if the amendments merely repeat the changes to be made in the substitute specification or if the amendments to the specification are to be entered after entry of the substitute specification. Applicant agrees and submits herewith a new substitute specification without claims or abstract in both clean and marked-up versions.

Item 4: The Examiner states that the disclosure is objected to because of the following informalities: at page 4, line 27, "limited" is misspelled and at page 51, line 30, a SEQ ID NO needs to be inserted after the nucleotide sequence. If the Examiner grants Applicant's request to enter the substitute specification these objections will be moot as the requested corrections have already been made in the substitute specification submitted herewith.
